DETAILED ACTION

Election/Restrictions

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - Claims 1-16 and 29-36, drawn to an apparatus for the repair of a cardiovascular valve, classified in class 606, subclass 142
 - II. Claims 37-40, drawn to a fastener of securing coapted valve leaflets together, classified in class 606, subclass 213.
- 2. The inventions are distinct, each from the other because of the following reasons: Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination can be used without invention II or another fastener. The subcombination has separate utility such as wound clamp.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Invention I is not required for Invention II, restriction for examination purposes as indicated is proper.

Art Unit: 3731

3. This application contains claims directed to the following patentably distinct species of the claimed invention I:

Page 3

Species 1: Claims 1-15 and 29-36 and

Species 2: Claim 16.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, no claims are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over

Art Unit: 3731

the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

4. During a telephone conversation with William Dippert, Reg. No. 26,723, on September 23, 2003, a provisional election was made with traverse to prosecute the invention of Group II, claims 37-40. The election in the response of July 21, 2003 was withdrawn, because the invention of Group I was mistakenly elected by the applicant. The amendment of claim 37 in the response is hereby acknowledged. Affirmation of this election must be made by applicant in replying to this Office action. Claims 1-16 and 29-36 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Drawings

5. The drawings are objected to because, in figure 21, --titanium— is misspelled. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Art Unit: 3731

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 7. Claims 37-40 are rejected under 35 U.S.C. 102(e) as being anticipated by Yoon (5,620,452). Yoon discloses, in the figures, a fastener comprising a first plate (18), penetrating elements (50) on the first plate, a second plate (16) hinged with the first plate (at 14), and receiving holes (28, 30, 32, and 34) on the second plate to receive entirely the penetrating elements. Note: The introductory statement of intended use ("for securing coapted valve leaflets together") has been carefully considered but deemed not to impose any structural limitations on the claims patentably distinguishable over Yoon's device, which is capable of being used as claimed if one desires to do so.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Meredith (4,064,881), Hulka et al. (4,112,951), Di Giovanni et al. (4,487,205), Cerwin et al. (4,498,476), Adams (5,275,578). and Bito et al. (5,649,937) teach fasteners with plates, hinges between plates, and penetrating elements.
